

Krazy Krane

with the Original Krazy Krane

The mission:

A contaminated area has been discovered!! (YIKES!! ☹) All objects on the floor must be put into the contamination bucket for everyone's safety!!

Time IS a factor because contamination area could spread and grow larger, thus making it tougher to operate the cranes with the given length of strings.

Tools:

- A "Krazy Krane"
- Strings with "S" hooks or clips to attach to the Krazy Krane.

Directions:

- Use the strings, with hooks or clips, to manipulate the Krane to "float" into the confined area to pick up objects and drop them into the bucket.

Requirements:

- All participant's strings, must be attached to the Krane at all times for the continuation of the Krane to operate and complete given task.
- Should a string become detached, the group must bring the Krane outside of confined area and re-hook before continuing.

Restrictions:

- ABSOLUTELY NO PARTICIPANTS IN CONFINED AREA at ANYTIME!!
Consequence(s) may occur if group member enters or body part enters confined area.
- Only the Kranes may pick up the objects, not strings or participants.
- Tying the strings onto the Krazy Kranes is NOT permitted.
- Tying knots anywhere on the strings is NOT permitted.
- A person may not operate more than one string at a time!!

Good Luck!! ☺

Variation for larger groups: have one clothes pin available to each person. Equally apart around the border, attach the pins to the white parachute cord next to the left foot. The area from one person's pin to the next is where a person is required to stay during the activity
